ARES\_DESTROY(3) ARES\_DESTROY(3)

# **NAME**

ares\_destroy – Destroy a resolver channel

# **SYNOPSIS**

#include <ares.h>

void ares\_destroy(ares\_channel channel)

# **DESCRIPTION**

The **ares\_destroy** function destroys the name service channel identified by *channel*, freeing all memory and closing all sockets used by the channel. **ares\_destroy** invokes the callbacks for each pending query on the channel, passing a status of **ARES\_EDESTRUCTION**. These calls give the callbacks a chance to clean up any state which might have been stored in their arguments.
