

NAME

`ares_set_local_ip4` – Set local IPv4 address outgoing requests.

SYNOPSIS

```
#include <ares.h>
```

```
void ares_set_local_ip4(ares_channel channel, unsigned int local_ip)
```

DESCRIPTION

The `ares_set_local_ip4` function sets the IP address for outbound requests. This allows users to specify outbound interfaces when used on multi-homed systems.

SEE ALSO

`ares_set_local_ip6(3)`

NOTES

This function was added in c-ares 1.7.4
